

Vydhra SQL Job-Ready Bootcamp

Duration: 30-40 Hours	Format: 2 Topic Points + Practice	Level: Beginner to Job-Ready
-----------------------	-----------------------------------	------------------------------

Course Structure

Module 01	Week 1 - SQL Foundations	
Topics Covered	SQL syntax, SELECT, WHERE, ORDER BY, DISTINCT, LIMIT/TOP, and query basics	
	Relational databases, filtering logic, and real-world query patterns	
Practice	Basic data retrieval and filtering exercises	
Outcome	Students write clean SQL queries to retrieve and filter data confidently.	

Module 02	Week 2 - Aggregations and Analysis	
Topics Covered	COUNT, SUM, AVG, MIN, MAX, GROUP BY, HAVING, and NULL handling	
	CASE WHEN for conditional logic and analytical reporting	
Practice	Sales and metrics analysis queries	
Outcome	Students analyze datasets using aggregations and conditional logic.	

Module 03	Week 3 - Joins	
Topics Covered	INNER JOIN, LEFT JOIN, RIGHT JOIN, FULL JOIN, and SELF JOIN	
	Table relationships and real-world multi-table querying	
Practice	Business-oriented multi-table query tasks	
Outcome	Students combine tables and extract meaningful business insights.	

Module 04	Week 4 - Subqueries and Advanced Filtering	■
Topics Covered	Subqueries, correlated subqueries, EXISTS, IN, and NOT IN	
	ANY, ALL, and nested filtering for intermediate SQL problems	
Practice	Complex filtering and nested query practice	
Outcome	Students solve intermediate SQL problems using nested logic.	

Module 05	Week 5 - Window Functions	■
Topics Covered	ROW_NUMBER(), RANK(), DENSE_RANK(), PARTITION BY, and ORDER BY in windows	
	LEAD(), LAG(), running totals, and interview-style analytical SQL	
Practice	Ranking, trend, and time-based analysis queries	
Outcome	Students solve advanced analytical and interview-level SQL problems.	

Module 06	Week 6 - Data Transformation	■
Topics Covered	CASE WHEN advanced usage, string functions, date functions, and formatting	
	Data cleaning and transformation techniques used in reporting workflows	
Practice	Cleaning and transforming messy datasets	
Outcome	Students prepare and transform data for analysis and reporting.	

Module 07	Week 7 - Database Design Basics	■
Topics Covered	Tables, schema, normalization basics, primary keys, and foreign keys	
	Index basics and performance considerations in SQL systems	
Practice	Designing simple database structures	
Outcome	Students understand how structured data is organized and optimized.	

Module 08	Week 8 - Capstone and Interview Preparation	■
Topics Covered	End-to-end SQL project, query optimization basics, and writing clean SQL	
	Interview questions, case-based problems, and timed SQL practice	
Practice	Final project using a real-world dataset	
Outcome	Students complete a portfolio-ready SQL project and gain interview confidence.
